Dear Vic:

In reply to your letter regarding Metalon EP 1.5 grease. We first decided to try Metalon EP 1.5 grease approximately two years ago on our merchandiser saw arbor bearings due to the high failure rate. At that time we were changing one to two arbors per week. Since using Metalon grease, our arbor bearing failures have been reduced to approximately one per month or longer. Due to the excellent results at the merchandiser we have changed over 95% of the grease in the planer/sawmill to Metalon, including automatic greasers, with excellent results.

We have also just added your Metalon C₂ additive in the planer bander hydraulics and have seen a substantial reduction in operating temperature.

Sincerely,
