Mr Tim Wright
Metalon Products
1116 2 nd Ave. S
Cranbrook B.C.

Dear Mr. Wright

We are pleased to inform you of the success we have achieved using metalon products. Some of the situations that we have noticed a marked improvement in performance are as follows

1. Our edger is run by a Catapillar D311 engine . Before we added metalon M to the crankcase , and Metalon Megasel to the fuel tank , the engine was scheduled for complete tune up . Approximately two hours running time after adding Metalon the engine had a definite reduction in smoke emissions and the saws were able to cut through thicker slabs with a lot less drop in rpm , resulting in increase production through the edger. To this date we have not found that a tune up is required.
2. After adding Metalon products to the 3306 Cat engine on the head saw we found that the engine speed did not change noticeably through out the cut. Prior to adding Metalon the engine speed would drop 80 to 100 rpm through the same cut . The fact that the saw is able to maintain constant rpm definitely increases production.

Because of the above results we are now using Metalon products in all of our equipment . We are also using Metalon grease in every application .

I have found that using megasel in my 1994 GMC Yukon that my mileage has increased from 21.6 mpg to 25.8 mpg.

I find that using this product is definitely a benefit to our company .

Yours Sincerely,

Perry Peterson
