To: Vic Hodges

We have sold your product over the past eight years and below are some of the results we have heard.

1. Atco Lumber at Park Siding were repacking bearings in their dry kiln every three months and replaced them every six months. By using the Metalon Grease, they check them every six months and figure they will replace them possibly every 1 1/2 years.
2. Dean Bonderoff uses the diesel fuel additive in his Mack Logging Truck and he says the unit starts considerably easier in the winter and he has picked up a gear going over the Salmo-Castlegar summit to the Pulp Mill.
3. I forgot to mention Vic, that we are using the Metalon Grease throughout the sawmill and planer mill at Atco Parks Siding. We have noticed that some boom pins on their 980C that used to take 24 to 25 pumps with the grease gun before it would crack, now only takes approx. 15. We probably have more problems with operators wasting grease because they don't need as much and we end up with grease all over.
4. We also have quite a few customers that own Ford pickups with diesel engines using the Megasel fuel additive.
5. Personally, I use it in my pickup and van and noticed my oil pressure has increased slightly.

The products are all getting good reports as a whole. We have not received any negative reports to date. We feel the product is excellent and will continue to promote it.
