

TARGET PRODUCTS LTD.

A Wholly-Owned Subsidiary Of The QUIKRETE™ Companies

March 12, 2009

Attention Vic Hodges
Metalon Products
Calgary Alberta

This letter is to inform you of the success we have had since switching to using Metalon EP 1.5 grease.

At our operation here in Calgary we have a bearing running in our aggregate dryer in very dirty and hot conditions. The temperature can reach 380 degrees celsius at a high RPM. Before using Metalon, this bearing would have to be changed out on an average of every six weeks. Since we have switched to Metalon EP 1.5 grease this bearing has now run for 14 months. Because of these results and the savings of time and money we have made Metalon grease our choice here and at our other location in the lower mainland in all greasing applications.

JAVIER ORNELAS

Yours truly,

Javier Ornelas
